

FASHION ADD-ON

IDEAL FOR PRODUCT VARIATIONS

THE IDEAL SOLUTION FOR MANAGING YOUR ITEMS WITH MULTIPLE VARIATIONS, SUCH AS: COLOR, SIZE AND MODELS.

- ✓ Making sub-items and removing them with just a few clicks
- ✓ Updating sub-items prices from the main product
- ✓ Stock per warehouse on sub-items level
- ✓ Extensive reports on product variations
- ✓ Integratable with Retail XML, Scanning XML and Magento webshop

WHO IS IT FOR?

The fashion add-on is developed for wholesale and retail companies that offer their products in different variations. Managing those individual item's master data in SAP Business One is a time-consuming and error-sensitive activity. The Fashion add-on provides a solution for this.

WHAT CAN IT DO?

The Fashion add-on simplifies the management of items with multiple variations, such as color, size and models. In practice, this means that;

MAINTAINING ITEM MASTER DATA

- ✓ Multiple dimensions are possible, such as; size, color, models etc.
- ✓ Variations are created simply and systematically from one main item.
- ✓ Transfer data as needed when creating subsections.
- ✓ Update prices of all sub-items from the main item.
- ✓ Remove product models easy from the main item, for example when you no longer offer a certain color.

MANAGEMENT AND REPORTS

- ✓ More valuable reports, because main- and sub-items are linked to each other. This gives a quick overview of which model and color are sold more often.
- ✓ The sub-items are also recorded in the item master data, meaning that all SAP functions remain available.

MARKETING DOCUMENTS

- ✓ Through a three-dimensional input screen; in row, column and tab, you can enter all product models.
- ✓ Stock data is available of all models for all warehouses.

"Do you want 10 classic t-shirts in blue, size S; 20 Standard t-shirts in blue, size L; and 11 t-shirts Classic in red, size M?"

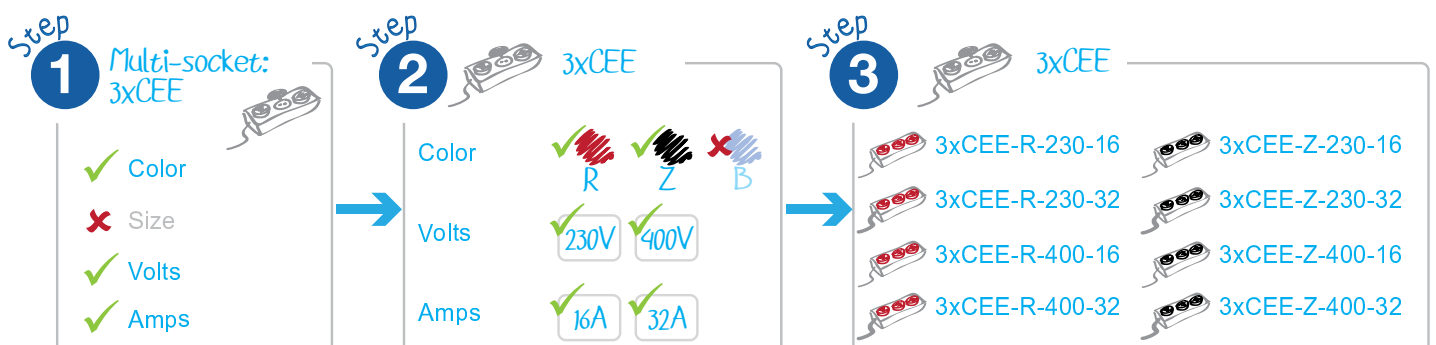

This is easy to execute in the three-dimensional input screen. With just a press of a button, all product models with the wanted amount are entered in the document."

INTEGRATION MAGENTO, RETAIL AND SCANNING

The Fashion add-on fully connects to the Magento Connector, Retail XML and Scanning XML.

- ✓ All functions for color, size and model are available in the webshop, on the shop floor and in the warehouse.

MAKING SUB-ITEMS WITH FASHION XML; EASY AS 1,2,3

1. Choose all dimensions relevant for the item.

2. Select the desired product models per dimension.

3. An overview will show all possible sub-items. It is possible to make adjustments to this.
