

RETAIL XML

THE SOLUTION FOR THE SHOP FLOOR

ALL SHOP TRANSACTIONS, BOTH LOGISTICALLY AND ADMINISTRATIVE, ARE PROCESSED REAL TIME IN SAP BUSINESS ONE

- ✓ The benefits of an ERP system with the functions of an integrated POS application
- ✓ Centralized management of items, with multiple shop stock and all information in the shop real-time available
- ✓ All shop transactions, customer cards and repairs are sent directly to SAP Business One and are retrievable
- ✓ Product images and cross-sell are easy visible on the register to assist sales
- ✓ The benefits of SAP Business One on every location without each shop having its own ERP system

FOR WHO IS IT?

Retail XML is the ideal solution for centralized management of items, stock, orders and administration of shops.

This solution is not only suitable for large chain stores or franchises, but also for independent stores.

FOR FRANCHISE CHAINS

Having the benefits of common purchase for franchise chains, but keeping independence per store on product mix and financial administration.

INDEPENDENT STORES

Everything in one system means accurate overviews, faster anticipation on events and lower accountant costs.

WHAT CAN IT DO?

“Because of centralized management, the product mix and prices only have to be determined once. Also, customer cards and the purchase of (independent) stores can be centrally managed.”

ADMINISTRATION EFFICIENT & UP-TO-DATE

- ✓ Item information and stock are centrally managed. Product changes are shown directly on the register and will immediately trigger an in-store stock update. Stock differences will belong to the past!

- ✓ Specific, adjustable advice per store chain for stock redistribution.
- ✓ All store transactions, both logistically and (financially) administrative, are directly sent to SAP Business One and are available on every workplace upon request.
- ✓ Selection- and print-possibilities for barcodes and serial numbers.
- ✓ Customer cards, gift cards and repairs are saved in one place.

BENEFITS IN THE STORE

Retail XML brings the possibilities of SAP Business One to every one of your locations, without each store needing its own ERP system.

- ✓ Product images and cross-sell are easily visible on the register.
- ✓ Customer cards, gift cards, repairs and allocation of discount can be applied in the store and are directly sent to SAP Business One.
- ✓ It also works on touchscreens and tablets (iPads).
- ✓ Extensive cash-up, cash deposits and cash issue with accountable financial administration.
- ✓ Certified Pin integration with the register.
- ✓ Choice between a physical and a virtual POS server.
- ✓ The receipt can be sent by email.

MANAGE EVERYTHING CENTRALLY AND PROFIT REAL-TIME LOCALLY
