

# SCANNING XML

YOUR BUSINESS DATA AVAILABLE IN A MOBILE FORMAT

THE MOBILE SOLUTION TO ENTER YOUR BUSINESS DATA ANYTIME AND ANYWHERE, WITH A DIRECT CONNECTION TO SAP BUSINESS ONE

- ✓ SAP Business one and Scanning XML together as Warehouse Management System (WMS)
- ✓ On- and offsite real time-availability of all relevant data from SAP Business One
- ✓ Fast and flawless processing of inventory mutations with a mobile scanner and barcodes
- ✓ Simply add (service)orders and quotations on a device, and add them directly to your SAP database
- ✓ For every application a suitable device and a custom-build environment

## WHO IS IT FOR?

Your personnel might not always have a fixed workplace or office. Whether you employ warehouse employees, a sales representative in the showroom, or a technician who is always on route. For every scenario with mobile data input, Scanning XML provides the solution.

## SOLUTIONS

Scanning XML connects the mobile input directly to one single database, the SAP Business One database. This way, the database is always up to date without any additional manual activities.

- ✓ Real-time tuning of financial and logistical processes.
- ✓ Quick and easy scanning with a wireless scanning device and direct feedback on your screen.
- ✓ With a real-time connection via Apache Tomcat and XML Webserver, double input and manual import are history.
- ✓ Real-time and accurate management of financials and logistics.
- ✓ The application of barcodes further enhances the efficiency and reduces the chances of errors.

*“With the small investment we did and the increase of efficiency and effectiveness, the Total Cost of Ownership (TCO) turned out to be very low.”*

## QUICK AND EASY PROCESSING OF INVENTORY MUTATIONS

- ✓ Goods receipts are directly linked to the correct purchase order, even with a partial goods receipt.
- ✓ Picklists are retrievable on location and picked items are directly scanned into the SAP database.
- ✓ Inventory transport and inventory counting are processed by a special module with help of the handheld scanner.

## ENROUTE SCANNING

Employees might not always be at the office. A mobile service technician or a sales representative on an exposition, for example.

- ✓ Goods receipts are directly linked to the correct purchase order, even with a partial goods receipt.
- ✓ Picklists are retrievable on location and picked items are directly scanned into the SAP database.
- ✓ Inventory transport and inventory counting are processed by a special module with help of the handheld scanner.

## REQUIRED HARDWARE

Serac delivers all the hardware you need. Scanning XML is compatible with various mobile devices like iPod, iPad. Android devices and handheld scanners.

*“The user interface is customer friendly and clear, even on an iPod.”*

## ALWAYS CONNECTED TO THE SAP BUSINESS ONE DATABASE
